

Supplementary Materials for Reviewer AZFg

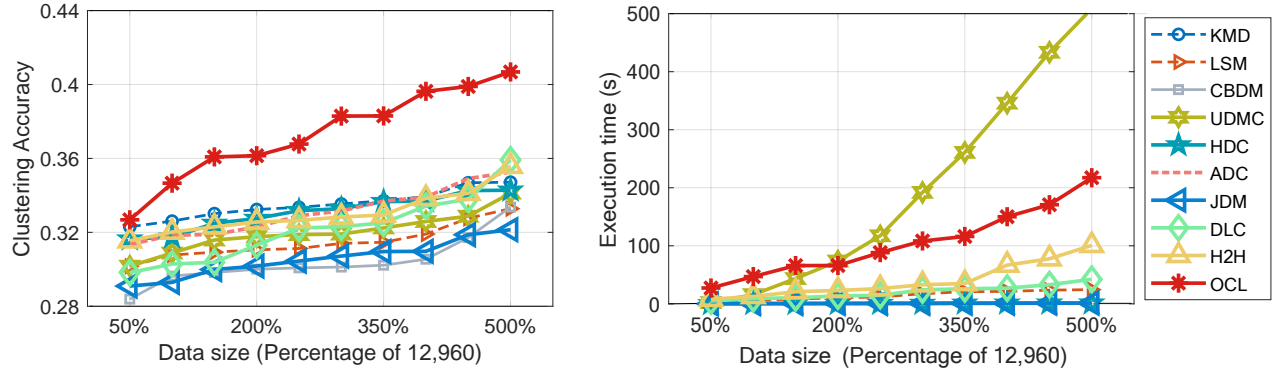

Figure 1: Clustering accuracy and execution time on NS dataset under different sampling rates 50%, 100%, 150%, ..., 500% with step size 50%. Please note that the labels of objects are also sampled, and are only used to evaluate clustering accuracy. Since sampling attributes are meaningless for evaluating clustering accuracy, only the results w.r.t. number of data samples are reported here.
